

Stencil Concrete

Stencil concrete is the application of stencil patterns and colour hardener into the surface of fresh pour concrete, producing a harder wearing decorative coloured surface resembling paving or natural stone finishes.

Colour Hardener can also be used without stencil pattern to provide a simple natural coloured area.

Keeping abreast with modern trends Sydney Decorative Concretors Warehouse have recently introduced a fresh and vibrant colour range. Its range of colours will brighten up any area and allow you to compliment other colours around your home including roof tiles, brickwork or even your garden.

Our extensive range of stencil patterns will suit all areas, from old style cobbles to natural bush rock through to stylish tiles.

Why have plain concrete when you can have value adding decorative concrete!
